CONCLUSION 9

VERSION

Version	Date	Author	Revised by
2.0	Des – 2015	Bernat Carbonell	

Objective of this fact-sheet is to explain how to retrieve contents of all our hotels.

CONCEPTS

Hotel contents are based on establishment description, amenities, multimedia content and erratas.

Erratas: any kind of information related to the establishment for a specific period.

Example: “ swimming-pool will be painted from 10/02 till 15/02”

APPLICATION DOMAIN

This feature applies to any agencies

REQUIREMENTS

- Access to FTP server to retrieve flat files
- Access to WS environment to retrieve data via ws.

Any agency can retrieve information of any of our properties via flat files or using our web services operations. We strongly recommend to use flat files to build and update your inventory. Web services operation may be used only for “on demand”: we do not recommend to use these operation for massive update.

The flat files may be hosted in our ftp server or in any server at your end.

Our web sales platforms allow to retrieve a printable view of any property along with its amenities

FLAT FILES: Hotels file – Diff file – Hotels city file

Our system generates every Friday flat files containing the complete hotel information list: Hotel name, id, address, telephone, Geo coordinates, pictures, erratas,... all amenities covered by our system. (please refer at our online documentation to get the complete list of fields covered).

The file is available in 2 formats: XLS and XML.

We recommend to set up an “automatic update” based on this weekly release: The process should disable the hotels removed, activate the hotels created and update the hotels modified .

Translation: Our static content is available in Spanish, German, French, English, Italian and Portuguese.

Multimedia content:

In the flat file, for each hotel, we deliver the URL to access the multimedia content (so far only pictures are available). These URL are pointing at one of our FTP Servers, only to provide you the content but not to access it directly from your system: You need to host the pictures in your system to access them Live.

<type>ERRATA</type>

</comments>

the errata category is RECLAMATIONS

The errata text is ONLY ACCEPTED DURING THE STAY AT THE ACCOMMODATION.

This text must be shown during the availability search, before the confirm process and printed in the voucher.

Differential file:

Content difference file is available in the same format (XLS/XML) like our regular hotel content file, which contains regular update of any exceptions in our static hotel content data such as Hotel created, Hotel disabled, hotel modified.

HotelsCityFile:

This file may also be generated upon request in order to provide you our geographical and operational structure related to the hotels habilitated. In this file you will find our cityCodes and AreaCodes.

Hotels Contents via web services

Our system provides the same information via web services operations, on-line: i.e. you do not have to wait for the flat file to create or update a property.

We do not recommend to use web service operation for massive update.

Operation getEstablishmentByname retrieves all the basic information of the corresponding hotels contents for the specified area: id, name, GPS. 1St image URL...

Operation getEstablishmentDataExtends retrieves the full property content as displayed in the zip file, for 1 specified hotel.

getEstablishmentByName

To retrieve all available basic hotel contents per area specified

getEstablishmentByName Request

```

CONCLUSION

Our system offers various ways to retrieve hotel content data. This document explained how to use the flat files and our web service operations: Flat files are available every week. Update must be implemented to get always a valid information. Web services operations deliver the same information on-line: both ways may be implemented to get a fully optimized system. We strongly recommend to use the zip file for massive updates.

Our web platforms Jumbonline or JumboBeds deliver a “human readable” format: just click on any hotel name: the corresponding fact-sheet will open showing hotels data and amenities.

Do not hesitate to refer to our online documentation available with the following URL:
<http://doc.xtravelsystem.com>
