1

DESCRIPTION

This document includes the description of all the methods to handle transfer booking operations: availability and confirm operations.

In the file MAN_xts_WSClientSpec_en_base you will find a group of tips and recommendations for the correct use of our API that must be reviewed before carrying out any development.

We work with an online, stateless system, so the product received may change at any time. Also, some suppliers return illustrative prices/cancellation terms at availability. That's why we strongly recommend the use of the Valuate message to ensure the results.

Our API also allows search requests and confirmations by ZONE, however, for a correct use of the API it is mandatory that bookings are made by HOTEL, for the whole booking flow (availability-valuate-confirm). It is for this reason that only requests per HOTEL will be certified and be valid after LIVE certification.

Another important aspect to take into account when developing the API of transfers is that the information of FLIGHT is mandatory to be sent, to avoid operation issues when transfer driver collect customers at the pickup point. This info must be sent in the Confirm step.

TEST ENVIRONMENT ACCESS

WSDL: https://live.easytravelsystem.com/public/v1_0rc1/transferBookingHandler?WSDL
Endpoint: https://live.easytravelsystem.com/public/v1_0rc1/transferBookingHandler

GENERAL CONDITIONS

The dates have this format: YYYY-MM-DDTHH24:MM:SS. Example: 2018-11-02T12:00:00
To avoid problems with different time zones always use the time format as
YYYY-MM-DDT12:00:00

METHODS

getTransferEstablishments

Returns a list of hotels with available transfers.

getTransferEstablishments Request

agencyCode (required)	Agency code. Unique code for each customer.
brandCode (required)	Brand code. Same code for all methods.
pointOfSaleId (required)	Point of Sale. Same code for all methods.

IT Project management, analysis and quality assurance Department | XTravelSystem Web Service. Transfer Handler

2

airportCode	Airport code. See *commonsHandler:getAirports*. (send either airportCode, areaCode, cityCode)
areaCode	Area code. See *commonsHandler:getAreas*. (send either airportCode, areaCode, cityCode)
cityCode	Area code. See *commonsHandler:getCities*.. (send either airportCode, areaCode, cityCode)
fromRow	From row number.
language	Response language.
numRows	Row number.
searchName	Hotel name (or partial name).

getTransferEstablishments Response

result		Result item. Composed of:
	address	Address of Establishment
	address	Street and Number.
	cityCode	City Code of Establishment.
	cityName	City Name of Establishment.
	countryCode	Country Code of Establishment.
	countryName	Country Name of Establishment.
	email	E-Mail of Establishment.
	fax	Fax of Establishment.
	stateCode	State Code of Establishment.
	stateName	State Name of Establishment.

IT Project management, analysis and quality assurance Department | XTravelSystem Web Service. Transfer Handler

3

	telephone	Telephone of Establishment.
	zipCode	Zip Code of Establishment.
	categoryName	Category name.
establishmentId		Establishment code.
establishmentName		Establishment name.

getTransferZones

Returns a list of Zones with available transfers.

getTransferZones Request

agencyCode (required)	Agency code. Unique code for each customer.
brandCode (required)	Brand code. Same code for all methods.
pointOfSaleId (required)	Point of Sale. Same code for all methods.
airportCode	Airport code. See **commonsHandler:getAirports**. (send either airportCode, areaCode, cityCode)
areaCode	Area code. See **commonsHandler:getAreas**. (send either airportCode, areaCode, cityCode)
cityCode	Area code. See **commonsHandler:getCities**.. (send either airportCode, areaCode, cityCode)
language	Response language.

IT Project management, analysis and quality assurance Department | XTravelSystem Web Service. Transfer Handler

4

getTranferZones Response

result	Result item. Composed of:
zoneId	Zone ID.
zoneName	Zone name.

getTransferAirports

Returns a list of airports with available transfers.

getTransferAirports Request

agencyCode (required)	Agency code. Unique code for each customer.
brandCode (required)	Brand code. Same code for all methods.
pointOfSaleId (required)	Point of Sale. Same code for all methods.
countryCode	Airport code. See ***commonsHandler:getCountries***.
language	Response language.

getTransferAirports Response

airports	Airport item, composed of:
code	Airport code.
iataCode	IATA code (If airport type is AIR).
name	Airport name.
type	Airport type. Values: - AIR - SEA - LAND

IT Project management, analysis and quality assurance Department | XTravelSystem Web Service. Transfer Handler

5

getCountriesByAgency

Returns a list of Countries with available transfers for a given agency.

getCountriesByAgency Request

agencyCode (required)	Agency code. Unique code for each customer.
brandCode (required)	Brand code. Same code for all methods.
pointOfSaleId (required)	Point of Sale. Same code for all methods.
language	Response language.

getCountriesByAgency Response

list		Country item, composed of:
	code	Country code.
	name	Country name.

availableTransfersV14

Retrieves available transfers for a given route. Able to searchTransfer By ZONE or by HOTEL, however use only option by HOTEL, rather than by ZONE.

availableTransfersV14 Request

agencyCode(required)	Agency code. Unique code for each customer.
brandCode(required)	Brand code. Same code for all methods.

IT Project management, analysis and quality assurance Department | XTravelSystem Web Service. Transfer Handler

6

pointOfSaleId(required)	Point of Sale. Same code for all methods.
adults	Number of adults.
children	Number of children.
childrenAges	Send one item per child. A childrenAges is required for each child. None is required if children = 0.

fromAirToHotelJourney (required if journeyDirection value = Going or Roundtrip)	Air to hotel journey details:
	
	- airportId: transfer airport departure code. Transfer departure site. See method ***getTransferAirports***.
	
	- establishmentId: transfer destination. See method ***getTransferEstablishments***.
	
	- flightInfo. Flight and transfer Information, composed of:
	
	flightNumber. Flight number, composed of:
	
	    1. company: either the IATA or IACO code (example: British Airways codes are BA or BAW)
	
	    2. number: flight number (usually a 3 or 4 digit integer)
	
	    3. fullNumber: flight number in full. Optional. This tag will be mandatory on confirm request.
	
	date: flight arrival date. Note that it is required to send the arrival date here, not the departure date. This date will be used for transfer collection day.
	
	from: Departure airport. IATA code (optional).
	
	localtime: Local time. Note that it is required to send the arrival time (same time which is received from Airline) here, not the departure time. This time will be used for transfer collection time.
	
	to: Arrival airport. IATA code (optional and should be the same airport as airportId)

IT Project management, analysis and quality assurance Department | XTravelSystem Web Service. Transfer Handler

7

fromHotelToAirJourney (required if journeyDirection value = Return or Roundtrip)	Hotel to Air journey details: 1. airportId: transferairport destination code. Transfer destination. See method ***getTransferAirports***. 2. establishmentId: transfer departure site. See method ***getTransferEstablishments***. 3. flightInfo. Flight and transfer Information, composed of: flightNumber. Flight number, composed of: 1. company: either the IATA or IACO code (example, for British Airways: BA or BAW). 2. number: flight number (usually a 3 or 4 digit integer) 3. fullNumber: flight number in full. Optional. This tag will be mandatory on confirm request. date: flight departure date. Note that it is required to send the departure date here, not the arrival date. This date will be used for transfer collection day. from: Departure airport. IATA code (optional and should be the same airport as airportId) localtime: Local time. Note that it is required to send the departure time (same time which is received from Airline) here, not the arrival time. This time will be used for transfer collection time. to: Arrival airport. IATA code (optional).
fromRow	Results will be sent from this row.
journeyDirection(required)	Requested journey direction (values are case sensitive): - **Going**: from airport to hotel. - **Return**: from hotel to airport. - **Roundtrip** (2 trips): from airport to hotel and from hotel to airport.
language (required)	Language sent in the response.
numRows(required)	Total number of rows requested (each row is a search result). Minimum value: 1.
fromAirToZoneJourney (required if journeyDirection value = Going or Roundtrip)	Please, don't use this option per ZONE.

IT Project management, analysis and quality assurance Department | XTravelSystem Web Service. Transfer Handler

8

fromZoneToAirJourney(r equired if journeyDirection value = Going or Roundtrip)	Please, don't use this option per ZONE.

availableTransfersV14 Response

adults	Number of adults
children	Number of children
childrenAges	One item per child.
fromAirToZoneJourney	xsi:nil="1" (when search method is By Hotel ID)
fromZoneToAirJourney	xsi:nil="1" (when search method is By Hotel ID)
journeyDirection	Requested journey direction. Values: - Going: from airport to hotel. - Return: from hotel to airport. - Roundtrip (2 trips): from airport to hotel and from hotel to airport.
transferOption	An option for the requested transfer. From 1 to n items in this response.

	Direction	Journey direction. Values: - Going: from airport to hotel. - Return: from hotel to airport. - Roundtrip (2 trips): from airport to hotel and from hotel to airport.
	locationTextGoing	Important information: available assistance if any, collection procedure, etc. Relevant for the Going transfer.
	locationTextReturn	Important information: available assistance if any, collection procedure, etc. Relevant for the Return transfer.
	numVehicles	Number of Vehicles for this option when serviceType is Private. Zero when serviceType is Shuttle or Speedy Shuttle.
	price	Transfer option price information object.
		paxPrice	Price per pax for this transfer option

IT Project management, analysis and quality assurance Department | XTravelSystem Web Service. Transfer Handler

9

		currencyCode		Currency code
		value		Amount per pax
	priceType			Price type. Values: - PAX: price per pax - VEHICLE: price per vehicle.
	supplement			Supplementobject. From 0 to n. Required supplements already included in price.
		currencyCode		Currency code
		description		Supplement description
		value		Amount
	total			Total transfer price.
		currencyCode		Currency code
		value		Total transfer amount, including supplements.
	unitPrice			Price information object. From 1 to 2 items. Depends on priceType
		currencyCode		Currency code
		value		Amount per unit.
		paxType		Unit price type. Values: - Vehicle: in case this is a per vehicle price (Private transfers) - Pax: in case this is a per pax price (Shuttle transfers)
	serviceType			Service type. Values: - Private: Private vehicle transfer - Shuttle: shared vehicle transfer - Speedy Shuttle: shared vehicle transfer with less stops than a conventional transfer.
	vehicleInfo			Vehicle information

IT Project management, analysis and quality assurance Department | XTravelSystem Web Service. Transfer Handler

10

		carId	Vehicle code.
		carName	Vehiclename.
		description	Vehicle description.
		imageUrl	Vehicle image url.
		numPassenger	Vehicle max capacity.
	Comments		Miscellaneous comments.
		Text	The value itself. See next note.
fromAirToHotelJourney			Air to Zone journey details as requested. Composed of:
	airportId		Transfer departure site. An airport code.
	establishmentId		Transfer destination. A hotel code if sent in request, in adverse case field will be return empty
	flightInfo		Flight and transfer data, composed of:
		date	Transfer departure date.
		flightNumber	Flight number, composed of:
			company — Either the IATA or IACO code.
			fullNumber — Flight number in full.
			number — Flight number.
		from	Departure airport.
		localTime	Transfer departure time (time of TimeZone local)
		to	Arrival airport.
		zoneId	Transfer departure site. An Zone code

IT Project management, analysis and quality assurance Department | XTravelSystem Web Service. Transfer Handler

11

fromHotelToAirJourney			Zone to Air journey details as requested. Composed of::
	airportId		Transfer destination site. An airport code.
	establishmentId		Transfer destination. A hotel code if sent in request, in adverse case field will be return empty.
	flightInfo		Flight and transfer data, composed of:
		date	Transfer departure date.
		flightNumber	Flight number, composed of:
		company	Either the IATA or IACO code.
		fullNumber	Flight number in full.
		number	Flight number.
		from	Departure airport.
		localTime	Transfer departure time (time of TimeZone local)
		to	Arrival airport.
		zoneId	Transfer departure site. A Zone code
		Type	Comment type. Values: - " **Cancellation term** " : cancellation terms <u>by transfer</u>. The format is as follows: [Release – Percent%]. For example: 7 – 5.0% , means cancelling a booking from 7 days before checkin date has a 5.0% of total booking amount penalty. **Note**: it is not possible to cancel a transfer online with a 100% percent penalty release (when it applies). You have to do it using the email, be aware of the fact the <u>booking cancellation request will remain "on request" and it is not confirmed</u>. Our staff will deal with it manually and contact your booking staff to confirm cancellation terms. - " **Cancellation email** " : email to request a manual booking cancellation, useful when having a 100% cancellation penalty, see previous note. - **"Sales Commission percent"** : Commission applied - **"Sales Commission amount"** : Amount of the previous percent applied to the transfer price.
fromRow			Results search data: from row number.

IT Project management, analysis and quality assurance Department | XTravelSystem Web Service. Transfer Handler

12

numRows	Results search data: row number.
totalRows	Results search data: total row number.

valuateV14

Valuates available transfer options for a given route. Able to ValauteTransfer by HOTEL or by ZONE; however use only option by HOTEL, rather than by ZONE.

valuateV14 Request

agencyCode(required)	Agency code. Unique code for each customer.
brandCode(required)	Brand code. Same code for all methods.
pointOfSaleId(required)	Point of Sale. Same code for all methods.

		serviceType		Service type. Values: - Private: Private vehicle transfer - Shuttle: shared vehicle transfer - Speedy Shuttle: shared vehicle transfer with less stops than a conventional transfer.
	Comments			Miscellaneous comments.
		Text		The value itself. See next note.
		Type		Comment type. Values: - " **Cancellation term** " : cancellation terms <u>by transfer</u>. The format is as follows: [Release – Percent%]. For example: 7 – 5.0% , means cancelling a booking from 7 days before checkin date has a 5.0% of total booking amount penalty. **Note**: it is not possible to cancel a transfer online with a 100% percent penalty release (when it applies). You have to do it using the email, be aware of the fact the <u>booking cancellation request will remain "on request" and it is not confirmed</u>. Our staff will deal with it manually and contact your booking staff to confirm cancellation terms. - " **Cancellation email** " : email to request a manual booking cancellation, useful when having a 100% cancellation penalty, see previous note. - **"Sales Commission percent"** : Commission applied - **"Sales Commission amount"** : Amount of the previous percent applied to the transfer price.
